

# KIT 4.2

Invest in R&D that informs industry and government approaches to trade and market access for Australian grain into export markets.

<b>Impact</b>	Growers benefit from maintaining and improving market access for Australian grain into export markets.
<b>Summary</b>	<ul style="list-style-type: none"><li>• Growers, exporters and government agencies improve collaboration to more effectively respond to existing and emerging market constraints and opportunities.</li><li>• Growers, exporters and government agencies work with foreign governments and importers to develop solutions to minimise market access constraints and maximise market access opportunities.</li><li>• Growers, exporters and grains industry representative organisations have access to new technical resources and capacity, enabling them to respond quickly to emerging market access constraints and opportunities.</li></ul>

## SCOPE

## INVESTMENT OUTCOMES

Collaboration on market access constraints and opportunities

4.2.1. Growers, grains industry representative organisations, exporters and government agencies have a collaborative framework in place to identify and respond to existing and emerging market access constraints and opportunities.

Development of solutions to trade constraints, requirements and opportunities

4.2.2. Growers, grains industry representative organisations, exporters and government agencies strategically engage with foreign policy makers, regulators, importers and competing exporters to reduce costs, improve efficiency and harmonise grain-trading systems.

New tools and resources to enhance the grains industry's capacity to address market access constraints or emerging opportunities

4.2.3. Growers, grains industry representative organisations and government agencies have access to the technical capacity and resources necessary to develop and implement new solutions to address market access constraints or capture emerging market opportunities.
